

The logo for Serix Online, featuring the word "Serix" in a bold, sans-serif font, followed by a stylized "O" that incorporates a power button symbol, and then the word "Online" in a lighter, sans-serif font.

Serix Online

- Your Customized ordering portal for all needs

Serix Online is your ordering portal that is open when you have time, around the clock, every day of the year. In the ordering portal, you can order all different types of credentials, such as Foto-ID cards, key fobs, access card and accessories.

As a customer, you can follow the entire process from order to delivery. There is also the possibility of an attest function where orders must be approved by an authorized person before proceeding to production. Production takes place with redundancy at our office in Stockholm there we annually produce around 5 million credentials with accessories.

The order portal also offers rereading of chip numbers to simplify adding of chip numbers in e.g. access control system.

For those customers who want to integrate card ordering from their own system, there is a modern API that offers all the features found in the web portal. If you are a reseller, you can manage your own customers by profiling the portal as your own and administer your customers products and prices.

Serix Online has proven to be a success as we today have over 5 000 users using this service to place their orders. You can do a test to order of a free test card by scanning the QR code.

Local production of access and Photo ID cards

More efficient and simplified card production!

Whether we handle your card production centrally or you manage it locally, you maintain full control over the entire process - all through a single, user-friendly interface. With our Instant Issuance solution, you get a flexible, cost-effective system that requires no upfront investment.

Our All-Inclusive concept covers everything: functionality, support, and design. We ensure secure data transmission to the Print Console without requiring any installation in your IT environment. All data is automatically deleted locally after card printing, ensuring a secure and seamless process. For Photo ID cards, you can easily encode and encrypt RFID technology for enhanced security.

Getting started is simple:

1. We upload your card layouts to our online portal.
2. The Print Console is configured and delivered with a printer or integrated with your existing setup.
3. Connect to WiFi and plug in the power.
