

Plastic card printer - print your own ID-card

We offer a wide selection of professional card printers that are adapted to fit for businesses and organizations of all sizes.

With plastic card printers from the leading manufacturers in the industry, Magicard and Fargo gives you a printer that fits your needs. Our plastic card printers achieve a print quality beyond the ordinary and deliver a comprehensive range of printers with accessories. There are printers for both single- and double-sided printing, with or without lamination, as well as with Direct-To-Card or ReTransfer technology. Different models meet different needs regarding both capacity, functions and price.

Our card printers give you the opportunity to encode your card when its printed and personalised. You can encode both PKI or RFID cards with EM, Mifare™, iClass or DESFire chip. But perhaps most important of all is that we offer service and maintenance for all the machines we supply. With our knowledge and experience, we help you choose the right printer based on your needs.

Prima 8

Prima 8 - for the highest print quality

Using retransfer printing technology, Prima 8 quickly produces high quality photo ID cards in large volumes, comparable to offset printed cards. Prima 8 is a reliable and robust solution in a compact package. With a retransfer printing process, the images are first printed on a thin film and then heated on to the card surface. This produces a glossy, high-resolution image, printed just over the edge of the card.

A special dye sublimation, Ultraviolet (UV), can be used with Prima 8 for printing invisible photographs, logos, text or symbols when issuing cards that require high security. The UV ink cannot be detected with the naked eye, but is only visible with the use of a UV light source. This special YMCK-UV tape offers an affordable yet highly secure feature to reduce susceptibility to counterfeiting.

Prima 8 can be equipped with a range of encoding devices to write secure electronic data to cards. Smart card encoding options including contact chip, Mifare™, DESFire® and iClass®. Special encoders with high security, for example EMV-accredited devices can also be adapted for payment card entry. Prima 8 can also be equipped with a built-in magnetic card encoder.

Cleaning set	3093

Magicard 300

Magicard 300 - en robust, hållbar och pålitlig plastkortsskrivare

This plastic card printer offers a wide color spectrum and prints in 300 x 300 dpi – perfect for photos on ID cards. It provides a more reliable representation of company logos and other images. The Magicard 300 is ideal for schools, colleges and medium-sized businesses that print up to 10,000 cards per year.

When it comes to secure and reliable ID card printing, you can trust the Magicard 300 to deliver. The printer takes advantage of Digital shredding™ which means that once the information has been used for a print job it is fragmented and scattered. This makes the information unrecoverable, a feature developed in response to the increasing global demand for regulation of personal information including initiatives such as European Union GDPR requirements.

A HoloKote® security watermark can be printed over the surface of the card. The Magicard 300 comes with 3 standard designs and allows you to add up to 3 custom layouts such as your company logo or any other unique security pattern.

Magicard 600

Magicard 600 - the world's most reliable plastic card printer

Faster print speed, higher quality and optimized security features. The Magicard 600 integrates seamlessly with existing infrastructure to deliver secure ID card processing.

Plug and play – to get you up and running quickly and easily, the Magicard 600 integrates with existing network infrastructure via USB, minimizing installation time and requiring little technical knowledge.

This plastic card printer has an eye for detail and can print at 600 x 300 dpi (monochrome), allows you to include microtext - and make it readable.

Magicard 600 offers superior quality with a wide color spectrum so the print becomes more vivid and colorful. This means a more true representation of the subject – perfect for ID card photographs and a more accurate depiction of company logos or other images.

Pronto100

Pronto 100 - The smallest and fastest printer that is also a more environmentally friendly option

A compact, versatile desktop ID card printer for small volume production - perfect for membership clubs and small businesses. Pronto100 offers the markets highest speed in the smallest package. Lightweight yet robust, the Magicard Pronto100 is perfect for a reception or office environment. Its portability and versatility won't compromise on print performance, making it ideal for remote ID card production at events or out in the field. Combine it with any of our software and you've got an instant solution that can get you printing your ID cards within minutes.

The Pronto100 is the perfect printer for organizations looking to purchase sustainable products thanks to its use of recycled materials. Print full color cards or use thermally activated cards and print or erase and rewrite in black and white. Rewritten cards are ideal for visitor management or for printing loyalty cards. Save both the environment and money by rewriting cards up to 500 times.

HDP5000

HDP stands for "High Definition Printing" and this means that the machine prints on a transfer film which is then applied to the card. The technology provides superior print quality, higher reliability and durability, with increased security. Your photo ID card will have all these properties when you print and encode your cards with the HDP5000. Using High Definition Printing enables an image quality that looks more like a photo than a traditional ID card.

With a versatile modular design, it allows for variety as the customer might require change. Double input magazine, double-sided printing, single- or double-sided lamination and card encoding are all functions that can be upgraded when your needs arises. Installation and operation of the printer is very simple and intuitive, which means that you can start your production very quickly.

HDP6600

The FARGO HDP6600 is ideal for organizations of all sizes that need transmission technology to routinely issue secure and durable ID cards at high speeds. As a cost-effective, environmentally friendly and reliable solution, the HDP6600 provides high-resolution 600 dpi printing capacity for superior text and image quality.

Designed to meet the needs for cost and efficiency conscious organizations. The HDP6600 produces cards at incredible speed and utilizes HID's innovative waste-free lamination technology. It helps you lower your high-volume lamination costs by up to 40%.
