

ID Service Cards

- Digital keys for municipalities and county councils

In Seriline's ordering portal, [Serix Online](#), you can easily order your service cards and accessories such as covered card holders, yoyos, lanyards and much more. Register today and choose which type of our service cards you want to order. You can also set up your own design. We then provide the requirements for the service card.

Safe service cards with all the technology you need

- High resolution print quality
- 16 million colors
- No annual fees
- No start-up costs

With over 30 years in the industry, you as an authority, municipality or county council can feel safe with Seriline as a supplier. Production takes place with redundancy both at our office in Stockholm and in Ronneby. We at Seriline put yours and our safety first and therefore have a very high safety rating for our entire operation. No data leaves Sweden and programs and portals are all produced by ourselves here in Sweden.

Fido2 and Mifare™ DESFire

Physical and logical access in the same card

Do you want to log in to your computer in a simple and secure way without having to remember passwords? Then the Fido2 solution is for you. With Fido2 you don't have to worry about someone unauthorized getting into your computer. Instead, you use a highly secure physical device that has a private and a public key. The private key never leaves the device, making it difficult for anyone else to gain access to the computer without permission.

Serix iD

Safe and fast identification with smartphones

Serix iD provides the user with a secure, dynamic and mobile identification of a person but can also be used for products. It can, for example, be used to verify the identity of caregivers within home care. The care recipient or his relatives can easily verify with the help of a Smartphone that the person is who they claim to be. It provides increased security and can, of course, be used regardless of occupational category. No app or installation are required on the phone.

Our three standard layouts
