

Create **PhotoID-card** with your own system

We offer complete solutions for creating professional PhotoID cards. When manufacturing ID and access cards, our systems are used by companies, municipalities and other organizations. The cards can be produced with your own equipment as plastic card printers, or sent online for production at Seriline.

To our PhotoID systems, you can add camera packages that include a high-quality digital camera for photography. The camera package also includes a stand as an aid for portrait photography, as well as an adapter for power supply and a USB extension cable for the camera.

To be able to take professional photos without shadows and get the right light in the photos, we also offer a complete flash package.

Nice design and elegant finish with unlimited design possibilities

A plastic card printer prints the personal information in four-color print on a card. Format and material are the same as for a credit card.

High quality and safety

The information on the card can be protected by a laminate with a security relief embossed into the card surface. You decide the content and graphic design.

Both portrait and landscape layout can be selected.

Software for your own production of PhotoID cards

We offer easy-to-use software that helps you keep the content and design of the cards in order.

All our software is in English or Swedish and is designed based on many years of experience in card manufacturing.

All types of plastic card printers, cameras and encoders can be used for our software. Encoding of magnetic strips are included as standard, as well as handling of barcodes and RFID chips, such as Mifare™. A layout editor is built into the programs for easy design of your own card layouts and much more.

Use existing equipment

If you already have your own equipment, you can supplement it with our software.

ID Enterprise

This is our flagship for the efficient production of photoID cards and authorization cards. The program contains many advanced functions for importing and exporting data, connections to external access systems, built-in report generator and much more. With the ID Enterprise Plus program, you can easily order cards via Online client, from different locations. The online client sends the card orders encrypted to the card production. ID Enterprise Plus automatically reads these into the SQL database. The operator checks the orders that have entered and adjusts the image quality if necessary. The cards are then produced with one click.

ID Express

Our best selling ID software is an affordable and complete card making software. Advanced functions for managing photos, card layouts and printing on different types of printers. ID Express combines card details with suitable layout for printing of professional ID or authorization cards. All data is saved in encrypted card files for highest security. Magnet and dash-codes are included as standard. Search and editing is fast and effectively. A program that is very easy to use, that we have further developed during many years. The program is available in both English or Swedish and can be easily installed.

Packaged PhotoID system
