

# Serix*CiD*

- Secure and fast identification  
with smartphones

## ABOUT SERIX iD

---

Serix iD provides the user with a secure, dynamic and mobile identification of a person or a product. The information is encrypted and is only available once per request. The service supports, for instance, the ability to check and register attendance at exams at a college or university.

In many cases, it is crucial to be able to verify a person's educational level for access to different types of premises and/or work vehicles. In that cases you can use Serix iD to support that type of system. Serix iD can be advantageously used to verify the authenticity of a product, or to identify a maintenance point in, for example, a factory, at an airport or a nuclear power station. The aim is to provide exactly the right instructions and control points for the specific maintenance occasion.

**Read more here!**

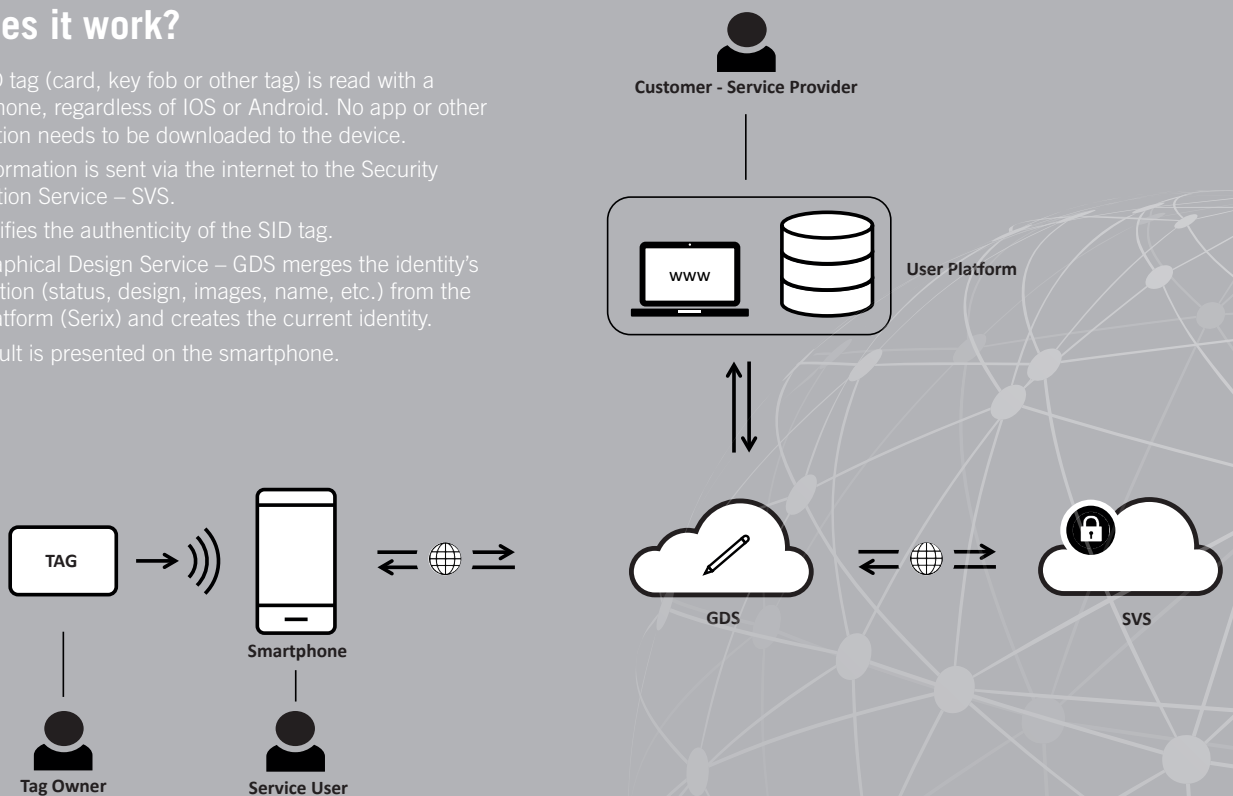

## Serix iD is:

- » Platform independent 
- » Safe / encrypted
- » Quick
- » Easily accessible
- » Can be used for both people and products in several areas

## How does it work?

1. The SID tag (card, key fob or other tag) is read with a smartphone, regardless of IOS or Android. No app or other application needs to be downloaded to the device.
2. The information is sent via the internet to the Security Verification Service – SVS.
3. SVS verifies the authenticity of the SID tag.
4. The Graphical Design Service – GDS merges the identity's information (status, design, images, name, etc.) from the user platform (Serix) and creates the current identity.
5. The result is presented on the smartphone.
