

SERILINE SUPPORTS VÄDERSTAD WITH EFFICIENT VISITOR MANAGEMENT

BACKGROUND AND CHALLENGE

Väderstad is a leading manufacturer of agricultural machinery, represented in more than 40 countries across all continents. To create a safer and smoother experience for contractors and visitors, Väderstad wanted to strengthen access management at its facilities in Väderstad and Linköping. By partnering with Seriline and expanding its visitor registration with the Visitor solution, Väderstad can now ensure that the right people gain quick and secure access to the right areas.

SOLUTION AND IMPLEMENTATION

To enable safer and more professional handling of contractors and visitors, Väderstad has further developed its systems and implemented Visitor for check-in, check-out, and access allocation. The new way of working provides greater control over who is present on-site, strengthens security, and contributes to a welcoming and professional impression for everyone visiting the facilities.

- **Streamlined contractor management**

Väderstad can now easily invite contractors in advance and ensure that all requirements and training are fulfilled before arrival. Appropriate access rights are automatically assigned based on who the person is and how long the work will be carried out.

- **Smoother on-site flows**

With self-service check-in and check-out, contractors manage their own registration in an easily accessible and secure way. At check-out, all information is removed from the systems to prevent unauthorised access, further increasing security.

- **Enhanced support for reception**

The reception teams now have clearer tools to manage both visitors and contractors, making it easy for Väderstad to maintain full oversight of everyone on-site. This contributes to a safer work environment and a professional welcome even before the visitor arrives at Väderstad.

- **Consistent experience across the organisation**

The Linköping office has also implemented visitor registration, ensuring a consistent and controlled reception experience regardless of location within the company.

RESULTS

With the new solution, Väderstad has created a safer and more welcoming environment for both contractors and visitors. Through a seamless and transparent access management process, all parties know what applies, contributing to a positive experience from the very first interaction. The automated process simplifies day-to-day operations for both staff and guests, while ensuring that the right people are in the right place at the right time. This not only strengthens security, but also reinforces Väderstad's image as a modern, responsible, and caring workplace.

“At Väderstad, it is important to us that both customers and visitors enjoy a safe and professional experience even before they walk through the door. Thanks to our collaboration with Seriline, we can offer a smooth and secure process that puts people and safety at the centre. It creates a positive feeling and a sense of security that characterise the entire visit – something we know is crucial for our guests to feel welcome and well taken care of.”
